Extra Catalogue**

The Boeing F/A-18E Super Hornet is a modern twin-engine, carrier-capable, single-seat fighter directly derived from the original design of the McDonnell Douglas F/A-18 Hornet. Larger and heavier than its predecessor, it is characterized by significantly improved flight and combat performance. Noticeable evolutionary design changes can best be seen in the revised wing-shape which is able to ensure maximum performance, particularly in terms of maneuverability. Additional design improvements can also be seen in the newer intake ramps for the engines, and also in the enhanced tail design. The aircraft originally entered service with the United States Navy in the early 2000's to replace the F-14 Tomcat, with the primary role of fleet air defense.
