

1/16 R/C U.S. Main Battle Tank M1A2 Abrams Full-Option Kit

Item # 56041

The latest super-realistic model in the 1/16 scale R/C Big Tank Series recreates that modern day U.S. stalwart, the M1A2 Abrams. The Abrams has been around since the early 1980s, with constant upgrades to ensure that it stays at the cutting edge of military technology. M1A2s were introduced from 1992, developed to be chock full of front-line technology and bring the M1 into the digital age. They featured depleted uranium armor, a modified commander's cupola and more, and saw action in the conflict in Iraq in 2003.

About the Model

- This is a 1/16 scale R/C model assembly kit. Length: 615mm, width: 231mm, height: 190mm.
- The chassis is powered by a gearbox with Type 540 motors and features metal parts such as lower hull, suspension arms, drive sprockets and more, for excellent durability.
- Aluminum gun barrel has traverse and elevation/depression movement, thanks to a servo and Type 130 motor.
- Multi-Function Unit is made up of turret and vehicle control units. It allows control of various movements via separately sold transmitter. These include turret rotation and gun elevation. It also ensures that a range of realistic sound and light effects (headlights, taillights, barrel flash) are paired with model actions.
- Gun barrel control system can train the main gun in a single direction, which it remains pointed in even as the tank moves or climbs, and the turret rotates.
- The included dual speaker offers highly realistic sounds.
- Compatible with the Battle System (Item 53447) for fun and interactive battles with friends!
